TOURNAMENTS: BUILDING A POSITIVE LEARNING EXPERIENCE THAT DRIVES ENGAGEMENT

Secure coding tournaments are a fantastic way for companies to build awareness and enthusiasm for secure coding. They can be highly engaging face-to-face or virtual events that get the whole developer community involved and started on a secure coding journey. Tournaments can be short — only a few hours — or run for days, and include a series of vulnerable code challenges where developers identify problems, locate insecure code, and fix the vulnerabilities.

Challenges should generally be based on the OWASP Top 10 and enable developers to compete in a software language they are currently working in to ensure it is relevant. Throughout the tournament, developers earn points and watch each other (and themselves) climb to the top of the leaderboard. There are many exciting examples of companies holding innovative tournaments that attract developer attention and drive participation. It also helps companies to find security champions in each scrum team, which is important to ongoing skill building.

GENERAL REGULATIONS FOR THE SECURE CODE WARRIOR TOURNAMENT IN JAKARTA, MARCH 5TH & 10TH 2020

1. OBJECTIVE

Developers can be empowered to be the first line of defense in their organization by making security highly visible and providing them with the skills and tools to write secure code from the beginning. This section describes an innovative approach to improving secure coding skills and outcomes that is simple, scalable and positive, for both development and security teams.
